## 820s Ultra Pumice (Coarse)

Information guide with Material Safety Data Sheets, v.205 10.09.2020

***Acrylic artists' medium with coarse ground pumice and ultrafine hollow glass microspheres. Mix in any proportion with acrylic artist colors to enhance color blending, slow drying time, and create thick texture. Dries to a granular concrete-like finish. Slow-drying formula.***

Two parts color to one part gel will thicken paint and enhance color blending. A one-to-one mix will create semi-smooth dimensional paint for heavy textural applications.

This gel dries slowly to a granular, concrete-like finish. The dried film is flexible and will have a matte appearance.

Because pumice granules are off-white, you may wish to add a small amount of titanium white in some situations to improve brightness.

*Note: The microspheres in this product are non-toxic and are made of 100% chemically inert glass, but mechanical skin and/or eye irritation can occur with contact. Keep microsphere products out of reach of children and pets. Do not sand, drill, saw, or otherwise abrade dried films, as this may cause dusting. Do not dispose of microspheres in septic or sewer systems. Do not spray apply. Gel is slippery; if spilled, clean up with rags or paper towels and plenty of water. Allow artworks to cure for 5-7 days before varnishing. Varnish with airbrush or spray can only, as brushed varnish can cause clouding. Dried film is flexible, but microsphere gel is not recommended for artworks that will be rolled, as thick areas may crack upon rolling. Contains drying retarder with 2-Methyl-2H-isothiazol-3-One, 1,2-benzisothiazol-3(2H)-One, which may produce an allergic reaction. This product is 100% free of crystalline silica.*

## Varnishing

Varnishing microsphere paintings with brushes may cause foaming and clouding due to the texture of the microspheres in dried film; it is recommended to use an airbrush or spray can to varnish all acrylic paintings that employ aggregates. First allow artwork to cure fully for 5-7 days; then use an airbrush to apply two thin coats of one part Liquitex™ Gloss Medium and Varnish to one part Liquitex™ Airbrush Medium. (Similar products can be obtained from Golden Artist Colors™.) If matte varnish is used instead, apply only one coat, or apply one coat of gloss and then one coat of matte. To prepare for Liquitex™ Soluvar™ or another removable final varnish, first follow the above procedure with two coats of gloss medium to provide an isolation coat.

## Notes on flexibility and abrasion

Microspheres are not recommended for artworks that will be rolled, as thick areas may crack upon rolling. All aggregate-based acrylic films are susceptible to abrasion, as particles may detach from the surface if scratched.
